DURHAM, NH – With eight days to go until the general election, Congresswoman Carol-Shea Porter and former Congressman Frank Guinta remain statistically tied in New Hampshire’s 1st Congressional District.

These findings are based on the latest **WMUR Granite State Poll**,* conducted by the University of New Hampshire Survey Center. Six hundred and seventy-seven (677) randomly selected New Hampshire adults were interviewed by landline and cellular telephone between October 22 and October 26, 2014. The margin of sampling error for the survey is +/- 3.8 percent. The sample included 555 likely voters (with a +/- 4.2 percent margin of sampling error). Included were 261 likely voters in New Hampshire’s First Congressional District (MSE = +/- 6.1%)

2014 U.S. Congress Election – 1st District

Guinta and Shea-Porter will face each other for the third straight time. Guinta defeated then incumbent Shea-Porter in 2010 while Shea-Porter won the seat back from Guinta in 2012. If the congressional election were held today, 39% of likely 1st District likely voters would vote for Shea-Porter, 36% would vote for Guinta, 1% would vote for someone else and 24% are undecided. When undecided voters are asked which candidate they lean toward supporting, 44% would vote for Shea-Porter, 40% would vote for Guinta, 1% would vote for someone else, and 15% remain undecided. While both candidates receive most support from members of their party (Shea-Porter leads 88%-4% among Democrats and Guinta leads 72%-10% among Republicans), they are deadlocked among Independents with 37% favoring Shea-Porter and 36% favoring Guinta.

* We ask that this copyrighted information be referred to as *the Granite State Poll*, sponsored by WMUR-TV, and conducted by the University of New Hampshire Survey Center.

Interest in 2014 Election

Interest in the 2014 election has increased with the election just days away – 70% of Granite Staters consider themselves extremely interested (36%) or very interested (34%) in the 2014 general election. Republicans (75% are extremely or very interested) have a slight edge on Democrats (72%) when it comes to enthusiasm, but this gap has closed since earlier this month. Just 57% of Independents are interested in the upcoming election.

Presidential Approval

President Barack Obama continues to have low job approval ratings in New Hampshire, which could have a significant effect on the upcoming election. Currently, only 40% New Hampshire adults approve of the job Obama is doing as president, 56% disapprove and 4% are neutral or don't know enough to say. Obama is still very popular among Democrats (78% approve, 17% disapprove), but unpopular among Independents (35% approve, 56% disapprove) and very unpopular among Republicans (5% approve, 94% disapprove). Among likely voters, 41% approve of the President's performance and 56% disapprove.

Feeling About 2014 Election Results

Currently over half of New Hampshire likely voters (54%) are excited about the 2014 election results (13% very excited and 41% somewhat excited), 23% are depressed (4% very depressed and 19% somewhat depressed), 18% are neutral and 4% are unsure. Republicans (60%) are slightly more excited than Democrats (55%), with Independents (42%) being the least excited.

Feeling about 2014 Election Results

Granite State Poll Methodology

These findings are based on the latest WMUR Granite State Poll, conducted by the University of New Hampshire Survey Center. Six hundred and seventy-seven (677) randomly selected New Hampshire adults were interviewed by landline and cellular telephone between October 22 and October 26, 2014. The margin of sampling error for the survey is +/- 3.8 percent. The sample included 555 likely voters (with a +/- 4.2 percent margin of sampling error). Included were 261 likely voters in New Hampshire's First Congressional District (MSE = +/- 6.1%)

The data have been weighted to adjust for numbers of adults and telephone lines within households, respondent sex, age, and region of the state. In addition to potential sampling error, all surveys have other potential sources of non-sampling error including question order effects, question wording effects, and non-response. Due to rounding, percentages may not sum to 100%. The number of respondents in each demographic below may not equal the number reported in cross-tabulation tables as some respondents choose not to answer some questions.
